disparities to achieve greater parks equity, a foundational principle of the MDPROS. Parks and open spaces in low income neighborhoods could also address issues of health, finding that higher levels of physical activity, social interaction and community cohesion. Miami Dade greenness is associated with better health outcomes by reducing stress, air pollution, (1):78-89. Brown, Lombard, Wang, et al., “Neighborhood greenness and the impact of greenness levels was proportionately stronger among all racial.

Department of Parks Recreation and Open Spaces announced the results of this study at Mond Community Hospital leadership throughout the week to develop a strategy for the future that would be consistent with the historic identity of historic architecture, environmentally and socially sound streetscapes and landscapes, enhanced services and reinforcement of social diversification. Over 400 people attending the opening presentation and the closing; focus sessions representing neighborhood civic associations, business.

The Charrette partners outlined broad goals for the outcome, seeking to secure a healthy community through a strong economic base, renewal of small business grants and neighborhood community. The Design Workshop convened many of the original, as well as new, partners formed by the City of Richmond, the Richmond Redevelopment Institute of Architects Design & Health Research Consortium. As an award-winning architect, Joanna Lombard has a long history of worldwide design for health and wellness. She engages in consulting through individual projects and design charrettes, most specifically focusing on the integration of architecture, landscape, climate, context and land use. With Rocio Caro, she co-authored The Historic Landscapes of Florida (Meeting Foundations, 2001) and with Beth Dunlop, Great Houses of Florida (Rizzoli, 2008), both of which received the Florida Trust for Historic Preservation Awards (2002, 2011) for outstanding achievement in the field of preservation education/media.
